

Vikinsa Capital Management

# VATA **Envisage** Settings Guide

v1.0 (Jan 09, 2021)

# VATA **Envisage** Dashboard Guidelines

- **Set Up:**
  - Watch the installation video first.
  - Read the disclaimer. By using this software you are automatically agreeing to terms and conditions and understand risks involved.
  - Make sure that you add your favourite currency pairs/instruments etc. to the dashboard list exactly how they appear on your broker's platform..
  - Do not monitor more than 10 many currency pairs and assets here in the dashboard for faster signals.
  - You can run multiple dashboards simultaneously on separate charts to monitor multiple pairs or timeframes.
  - Click the currency/asset name to open a chart or use your own template.
  - You can set up Pop-Up, Sound and Mobile Alerts. See the settings.
  - If dashboard is not working, check/reinstall VATA license indicator and also make sure that you have a valid, active and paid membership on Vikinsa.com
- **Best Practices:**
  - Watch examples and free strategy training videos first.
  - Never rely completely on VATA. Do your analysis and then use VATA for confirmation. Once you have done the analysis and you are waiting for a signal, add that pair to the dashboard and wait for dashboard to notify you.
  - **Buy signals** are shown as "B:B". Wait for proper signal. Never rush.
  - **Sell signals** are shown as "S:S". Wait for proper signal. Never rush.
  - Let the current signal candle close and then decide whether you want to trade or not
  - Always check the signal for validity on the chart, assess R:R and then only make a decision.
  - Must always have a good risk and trade management plan. Stop loss and Profit targets are just for guidance.
